

Our Environmental Ethos

We recognise that our activities impact on the environment and we are committed to understanding, managing and monitoring these impacts in order to continually improve our environmental performance.

Our approach to managing our environmental impacts involves taking affirmative action to continually apply the following principles:

- remaining informed about environmental issues;
- seeking to perform over and above legislative requirements;
- avoiding impact on air quality, water quality, and visual amenity;
- practicing good soil and site management;
- minimising, re-using and recycling resources throughout our business activities;
- teaching, practicing and embracing good environmental responsibility throughout our company culture; and
- communicating our environmental principles to key suppliers and other stakeholders.

We will continue to make practical adaptations to the way we run our business, while maintaining a firm appreciation of the needs of our customers and the level of service they expect.

Our Carbon Footprint

We have made a further commitment to the environment by working with BalanceCarbon to measure, manage and mitigate the emissions we produce. This means we have committed to undertaking annual independent emissions audits, identifying and implementing emissions reduction strategies and actions and purchasing certified carbon credits that replace or offset the equal amount of greenhouse gas that is emitted in the course of operating Stanvac Contractors Pty Ltd. Although not required by legislation, we have made a commitment to continue operating our business with zero net emissions.

Your support by choosing Stanvac Contractors is support for a cleaner, brighter environment.
